

NIKKO AM OPTION STRATEGY

Applies to: Nikko AM Wholesale Option Fund and Nikko AM Option Fund (retail) and Nikko AM KiwiSaver Option Fund

Market Overview

- US 10-year US Treasury bond interest rates reached a low point of 2.54% before retracing to 2.8% by mid-month. The 10-year rate closed January at 2.63%.
- The Federal Reserve said it will be patient when deciding on any future interest rate moves.
- There are signs US economic activity is slowing, trade tensions and US politics continue to create uncertainty. The Fed has responded by moving away from its bias to raising rates.

Fund Highlights

- The Fund returned 1.18% in January. After a turbulent close to 2018 the interest rate market was more settled over January which lead to a more normal pattern of returns.
- The investment strategy of investing in NZ bank bonds and selling short term option contracts on 10-year US Treasury bonds remains unchanged.
- If US interest rates stabilise around current levels, premium income received from selling option contracts will assist the fund in recovering December's losses.

Performance

	One month	Three months	One year	Three years (p.a)	Five years (p.a)	Ten years (p.a)
Wholesale ¹	1.18%	-2.89%	5.14%	4.81%	7.82%	11.26%
Benchmark ²	0.50%	1.50%	6.10%	6.27%	6.79%	6.92%
Retail ³	1.07%	-3.20%				
KiwiSaver ³	1.19%	-2.89%				

- 1>Returns are before tax and before the deduction of fees
2. Benchmark: Bloomberg NZBond Bank Bill Index plus 4.0% per annum. No tax or fees.
3. Returns are before tax and after the deduction of fees and expenses and including tax credits (if any)

Five Year Cumulative Performance^{1,2}

Portfolio Manager

Fergus McDonald,
Head of Bonds and Currency

Fergus is responsible for the investment of the Bond, Cash and Currency mandates. Fergus has been actively involved in the NZ financial markets since 1981. The portfolio management team for the domestic fixed income funds includes Ian Bellew, Fixed Income Manager and Matthew Johnson, Fixed Income Manager.

Overview

The strategy invests in cash and fixed interest investments, and undertakes a leveraged trading strategy based on selling options on global government bonds.

This fund is a specialist investment strategy and is suitable only for experienced investors who have an investment time frame of three years or longer and are comfortable to accept short sharp periods of high volatility

The fund uses a leveraged trading strategy and the impact of interest rate volatility is magnified by the use of leverage. For every \$1 in the fund, up to \$6 of call options and \$6 of put options can be sold. The options are sold in pairs, each comprising a call and a put option with the same expiry date. Accordingly, the effective leverage of the fund is 6 times the value of the fund.

In times of increased interest rate volatility it is likely the fund will receive a higher stream of income as new options sold will have higher income.

Objective

The fund aims to earn a return of the benchmark before fees, expenses and taxes over a rolling three year period.

Market Commentary

In a move that surprised markets by the extent of the change in stance, the Federal Reserve delivered a move towards a likely neutral monetary policy stance and away from their previous path of scheduled rate rises over 2019 and beyond. The Fed said it will be patient on any future interest rate moves and signalled flexibility on the path to reducing the size of its balance sheet. These statements were a significant move away from its bias toward higher borrowing costs. The Federal Open Market Committee "will be patient as it determines what future adjustments to the target range for the federal funds rate may be appropriate to support" a strong labour market and inflation near 2%. In a separate statement the Fed said it is prepared to adjust any of the details for completing the balance sheet normalisation in light of economic financial developments. The central bank also said it would be ready to alter the balance sheet size and composition if the economy warrants a looser monetary policy than the federal funds rate could achieve on its own.

With less pressure on interest rates from the Fed likely over 2019 the extent of any increase in longer term rates is also diminished. If current levels of volatility are maintained, income generated by the fund should remain at satisfactory levels however the speed and magnitude of yield changes in the US 10-year Treasury bond will continue to determine the total return of the Fund in the months ahead. From the Fed's statement it looks like it is now safer for investors to go into risk assets as liquidity and interest rate risk is now diminished and being underwritten by the US Federal Reserve.

Fund Commentary

The US 10-year bond yield traded in 26 basis point range over the month, moving between a high of 2.8% and a low of 2.54% before closing the month at 2.63%. US interest rates have fallen quickly from their recent high point of 3.25% in November. With the Fed's recent change in the policy stance to being more neutral on future rate rises it is difficult to see US 10-year yields rising significantly over the near term. The quick fall in yields resulted in losses being incurred. We look forward to a period of more modest levels of interest rate movements which is more beneficial to the fund.

Key Fund Facts

Distributions

Wholesale fund: generally does not distribute
Retail fund: generally does not distribute
KiwiSaver fund: does not distribute

Estimated annual fund charges

Wholesale: negotiated outside of unit price
Retail: 1.20%, refer PDS for more details
