What are the risks of investing?

Risk indicator for Nikko AM Global Shares Fund:

The risk indicator is rated from 1 (low) to 7 (high). The rating reflects how much the value of the fund's assets goes up and down. A higher risk generally means higher potential returns over time, but more ups and downs along the way.

To help you clarify your own attitude to risk, you can seek financial advice or work out your risk profile at www.sorted.org.nz/tools/investor-kickstarter.

Note that even the lowest category does not mean a risk-free investment, and there are other risks that are not captured by this rating.

This risk indicator is not a guarantee of a fund's future performance. The risk indicator is based on the returns data for the five year period to December 2017¹. While risk indicators are usually relatively stable, they do shift from time to time. The risk indicator will continue to be updated in future fund updates. See the product disclosure statement (PDS) for more information about the risks associated with investing in this fund.

Small differences in fees and charges can have a big impact on your investment over the long term. For the purpose of this example, performance has been calculated from 22 August when the first investment was made into the fund.

Hayley made the first investment of \$10,000 into the fund and did not make any further contributions. Notes

¹ Because the fund is less than five years old, the risk indicator uses returns data partly from returns of the fund, and partly (for the period 1 January 2013 to 31 August 2017) from the MSCI World Index (net dividends reinvested), expressed New Zealand Dollars (unhedged). As a result of this, the risk indicator may provide a less reliable indicator of the potential future volatility of the fund.

² All investments described in this fund update are in New Zealand dollars.
