

NIKKO AM NZ BOND FUND

Monthly Fact Sheet

31 December 2016

Investment objective

The objective of the Fund is to construct a portfolio of permitted investments that outperform the Fund's benchmark return by 1.0% per annum over a rolling three year period before fees, expenses and taxes.

Benchmark

Bloomberg NZBond Govt 0+ Yr Index (from 1 July 2016)

Fund description

The Fund aims to provide investors with regular income by constructing an actively managed investment portfolio of New Zealand bonds, deposits and cash with the potential for capital gain from New Zealand dollar fixed interest markets.

The Fund gains its investment exposure by investing into the Nikko AM Wholesale NZ Bond Fund which is managed by the Nikko AM NZ Fixed Income team.

Distributions

Quarterly. Last business days of March, June, September and December.

Management fees and other charges

A management fee of 0.60% per annum calculated as a percentage of the net asset value of the Fund will be deducted from the Fund.

Nikko AM may also recover expenses (including the Trustee fee) from the Fund up to a maximum of 0.25% per annum of the Fund's net asset value. As at the time of publication these expenses are estimated to be 0.125% per annum.

Buy/sell spread

Nil

Investment restrictions

Nikko AM Wholesale NZ Bond Fund

Commentary

Returns from the NZ bond indices were negative as interest rates moved higher in yield. For the month the Bloomberg NZ Government Bond Index produced a return of -0.61% while the All Swap index returned -0.69%, and the NZ Bond Corporate A Index returned -0.72%.

The Bond Fund had a negative return for the month as interest rates continued to move higher through December. Overall it was a poor quarter for bonds as market sentiment remained negative for bonds on the perception that President elect Trump’s expansionary policies of tax cuts and a higher fiscal spend will promote growth, higher inflation and larger borrowings for the US. With more protectionist trade policies there will also likely be “winners and losers” which could impact our major trading partners. NZ longer term interest rates are typically highly correlated with movements in US interest rates, whereas shorter maturities are more influenced by local factors with low cash rates anchoring the front end of the yield curve. Longer maturity bonds have been the worst performing bond assets with greater movements higher in yield than shorter maturities. Swap spreads widened relative to government bonds over the month which was a negative for credit versus similar maturities of government bonds. The NZ Government 2019 bond moved higher in yield by 13 basis points, the NZ Government 2021 bond finished 20 basis points higher, and the NZ Government 2027 finished 23 basis points higher in yield. Funds that were positioned with shorter durations (less exposure to changes in interest rates) performed better as their prices declined less when interest rates moved higher in yield. Corporate bonds also moved higher in yield although credit margins were relatively stable, and the higher running yield of corporate holdings will help benefit the Fund over the medium term.

Longer term interest rates in NZ have been under some pressure over the past three months as domestic and offshore economic news has generally been on an improving trend. The sentiment bias has been for higher interest rates, however there is now a lot of “positive sentiment” factored in with a higher and steeper yield curve and the market may want to see some more solid proof of improvement before taking yields higher - which could see some stability in rates or an unwind of the move. There remains a lot of debt in the world and large areas of the global economy are still underperforming. We have seen a large move higher in interest rates in a short amount of time and this has been steepening yield curves as longer term interest rates rise on the transition from a very limited inflation outlook to the prospects of recovering inflation. With a positive shaped yield curve bonds roll down the yield curve and move lower in yield as they become closer to maturity. We expect credit to outperform lower yielding government and swap bond investments over our three year investment horizon. The accrual trade of having a higher yielding portfolio is helping to offset some of the move higher in interest rates.
