### What are the risks of investing?

#### Risk indicator for the NZ Corporate Bond Fund:

The risk indicator is rated from 1 (low) to 7 (high). The rating reflects how much the value of the fund's assets goes up and down. A higher risk generally means higher potential returns over time, but more ups and downs along the way.

To help you clarify your own attitude to risk, you can seek financial advice or work out your risk profile at [www.sorted.org.nz/tools/investor-kickstarter](http://www.sorted.org.nz/tools/investor-kickstarter).

Note that even the lowest category does not mean a risk-free investment, and there are other risks that are not captured by this rating.

This risk indicator is not a guarantee of a fund's future performance. The risk indicator is based on the returns data for the five year period to September 2018<sup>1</sup>. While risk indicators are usually relatively stable, they do shift from time to time. The risk indicator will continue to be updated in future fund updates. See the product disclosure statement (PDS) for more information about the risks associated with investing in this fund.

## Example of how this applies to an investor

Small differences in fees and charges can have a big impact on your investment over the long term. For the purpose of this example, performance has been calculated from 23 April 2018 when the first investment was made into the fund.

Hayley made the first investment of \$10,000 into the fund and did not make any further contributions. There were no management fees charged during this period. As at 30 September 2018, Hayley received a return after fund charges were deducted of \$313 (that is 3.13% of her initial \$10,000). Hayley also paid \$15 in other charges. This gives Hayley a total return after tax of \$\$210 for the period ending 30 September 2018.

## Notes

<sup>1</sup> Because the fund is less than five years old, the risk indicator uses returns data (from October 2013 to March 2018) from the Bloomberg NZBond Government 0+ Year Index. As a result of this, the risk indicator may provide a less reliable indicator of the potential future volatility of the fund.
